## Facade and Structure Integration

### Building Data:

Site Restrictions	N/A
Structural framing system	Glulam/CLT
Structural frame	Concrete + CLT
Facade system	Glass+Wood Slats
Flooring type	Wood Cladding
Fire Protection	CLT fire rating
Construction method	Load bearing Walls

### Design Narrative:

The residential building is constructed of load-bearing walls that allow for large openings, and push-and-pull on the facade that creates a unique tectonic attitude accompanied by glulam/CLT material for strucutre, floor finish, and fenestration

Construction method	Load bearing Walls

### Design Narrative:

Similarly, the market is glulam/CLT structure, with glass for the exterior wall. The drawings on the left detail the market roof, which is constructed on glulam beams, and CLT panels, and finished with wood cladding.
